YANMAR

Why we say Yanmar—we make a world of difference.

The Yanmar company manufactured its first and the world's smallest diesel engine in 1933 and has progressed to become one of the world's largest producers of diesel engines, with over 6,000,000 units having been sold. These engines are used in over 130 countries for virtually every type of agricultural, industrial and marine application. From

powering a touring boat in North America to generating electricity in the Middle East, Yanmar diesel engines help keep the world running.

A natural for our diesel engines was in agricultural tractors. So in 1961 we built our first model and in 1967 we established our plant for specialized production of tractors.

R and D—where it all begins. The tractor's research and development program is comprised of several specialized engineering groups. These groups together give Yanmar the concentrated product research and development that has made them an innovation leader and symbol of engineering excellence.

But, we don't stop there. Each experimental model undergoes rigorous product testing, with constant improvements and fine tuning—before it goes into production.

What about production? Yanmar's Tractor plant incorporates the very latest assembly systems and the most advanced, state of the art technologies. All under the strictest of quality control. Add this to the sense of pride and responsibility felt by each employee and you have an end product that is the standard of the industry.

Sales and Service. Yanmar tractors have experienced a dramatic increase in sales from 1961 to 1981. This increased demand for Yanmar tractors is being met by an aggressive and constantly expanding sales and service network. A network committed to superior product support from warranty work to replacement parts.

Engines

3 to 5000. That's the horsepower range of our more than 400 types of Yanmar diesel engines. Each designed to be fuel efficient, ecologically compatible, and production oriented.

Our 2T and 3T all purpose series engines have a combination of 7 different models. All are

water cooled four-stroke vertical diesels. And they range from 5.8 to 36 horsepower. With the available accessories and options these engines meet requirements for various industrial, agricultural and marine applications.

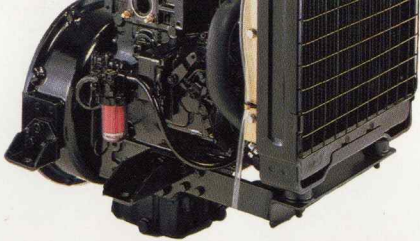

The TSC series engines are compact diesel power-packs. These horizontal, single-cylinder, water cooled engines range from 4 to 18 horsepower. They're a real workhorse. Plus they have unlimited uses and unequalled performance in providing power for; generators, agricultural, construction, and

industrial machinery and equipment, boats and vehicles.

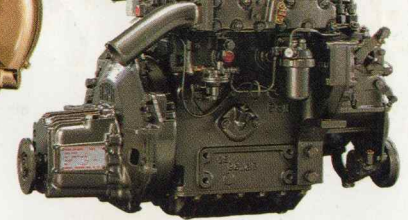

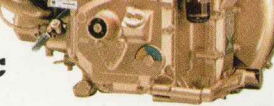

Yanmar marine engines are known worldwide for their versatility and dependability. They range in horsepower from 7 to 3600 and come in over 100 different models. Each can deliver the diesel power and trouble free operation you expect from a Yanmar.

Tractors & Implements

Yanmar gives you a choice. A choice of the best features available on small diesel tractors—anywhere.

Start with a choice of models from 16 to 33 horsepower, all with diesel engine muscle. Now add agricultural or turf tires. How about 2 wheel or

4 wheel drive? These are just a few of the choices you can make to get the combination that's right for you.

We're also proud of our engineering and common sense design. They're responsible for our

bevel gear system that eliminates universal joints, our power shift drive that lets you shift on the go . . . clutchless and with no loss of power, our Thermo Start that gives fast starts on cold days.

Teamwork is what you get when you match a Yanmar implement to a Yanmar tractor. Mowers, loaders, dozers, backhoes, tillers, post hole diggers,

logsplitters, rear blades, scrapers, rakes and snowthrowers—there's one compatible with each model tractor.

These are just some of the features, accessories and options available. See your Yanmar dealer for more details—Today!
