SAME[®]

Rely on us.

TRADITION renewed

A historic name of proven success, the SAME Explorer has undergone major redesign as regards both styling and technical characteristics. Compact, sturdy, agile and

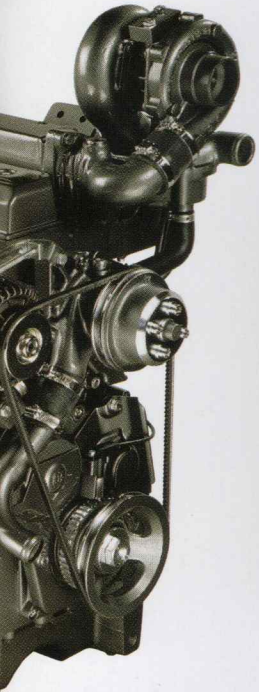

comfortable. The Explorer is designed to tackle the widest range of applications both in the farmyard and in the open field. Put it to the test; you won't be disappointed.

QUICK AND PRECISE, the Explorer never disappoints

Versatility and simplicity of use are the fundamental characteristics of this range of multipurpose tractors. This is why the Explorer offers the maximum in terms of really useful technology.

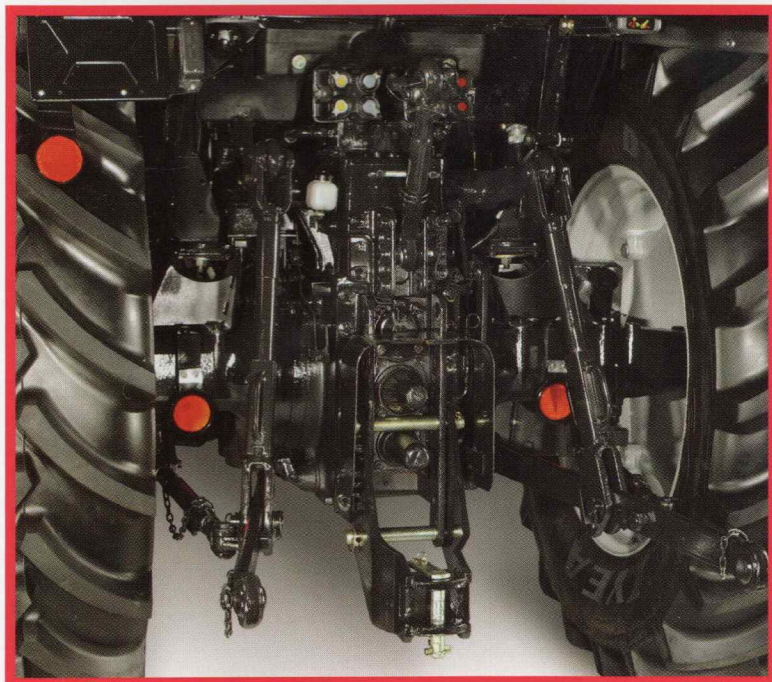

The synchronized 5-speed gearbox, with optional Agrosift (3 change on-the-go ratios for each gear) and creeper, provides 60 forward and 60 reverse speeds, thus ensuring the optimum ratio is always available whatever the operating requirements, simply at the press of a pushbutton with no need to touch the clutch pedal.

And if that's not enough, the Explorer also offers a hydraulic change on-the-go shuttle; what more could you ask for?

All wheel braking with disks in oil bath on all 4

wheels ensures safe effective braking at high speeds and on steep slopes. And to make headland manoeuvres a piece of cake, SBA traction control automatically controls engagement of the front-wheel drive and both differential locks.

And how about a full complement of Pto speeds (540, 1000, 540 ECON and 1000 ECON) so, whatever implement you use, you can always have the power you need, as well as low fuel consumption? With the Explorer, the fact is that you can work at maximum efficiency even at economy engine speeds, thereby optimizing performance without overloading the engine. SAME Explorer, a real champion of versatility.

A HYDRAULIC SYSTEM that exceeds expectations

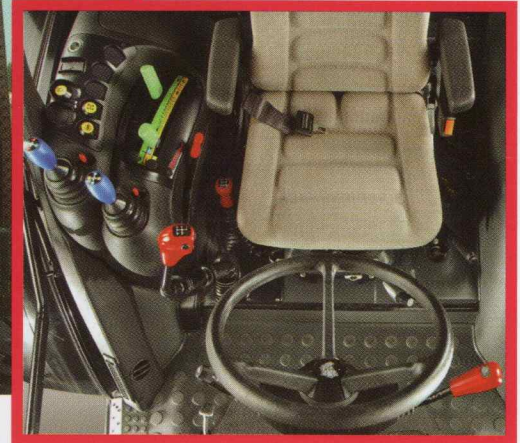

The Explorer's simple and highly functional hydraulic system ensures maximum performance even when using the most power hungry implements. The hydraulic pump (54 L/min.) that supplies the lift and the remote valves is totally independent from the hydrostatic steering system which has its own dedicated pump; this ensures smooth, precise steering also when the engine is running at low revs. Precision control of implements is provided by two cross-gate control levers mounted on the console. With a rear lift available in versions with mechanical or electronic control with radar, operating precision and productivity are guaranteed. And if you want to work with combined front and rear mounted implements, the front P.T.O. and 2000 Kg. (4409 lb) capacity front lift make everything quick and easy. Maximum safety is ensured by hydraulic braking system with oil-immersed discs on all four wheels. The Explorer is a truly tireless workmate.

All under control in MAXIMUM COMFORT

Such a tireless and dependable workmate cannot fail to be attentive to the needs of the driver. And the Explorer, regardless of whether you choose the platform or cab version, always offers the maximum comfort. The adjustable driving seat and steering wheel means that the driving position can be adjusted to your exact requirements. All the controls are ergonomically designed and rationally arranged for ease of use. On platform versions, noise is maintained at comfortable levels by the suspended platform, bulkheads and polycarbonate

baffles.

The cab represents the last word in comfort, making the operator feel totally at ease behind the wheel. The extensive glazing and the high visibility roof allow the operator to keep everything under control at all times, even when working with a front loader.

The ideal working environment is always maintained thanks to the climate control system and the high capacity filters that keep the atmosphere pleasant and healthy. SAME Explorer: hard to beat.
