

DIRECTOR VINE AND TRELLIS SPRAYERS

GOLDACRES
AUSTRALIA'S WORLD CLASS AG-SPRAYERS

**Telescoping
outer boom action.**

Makes hydraulic nozzle positioning from the tractor seat a breeze.

Designed to maximise droplet capture.

Director spraying gives better distribution of chemical over leaves & fruit.

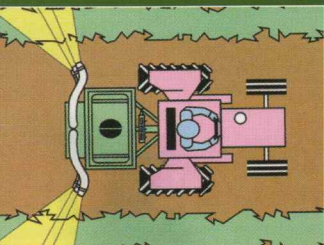

- Spray is directed away from operator. The Director is kinder to the environment because upward drift is minimised.
- Director sprayers can be used for high and low volume applications.

For efficiently environmentally sustainable spraying it is important to maximise droplet capture.

Chemical falling from the leaves to the ground or missing the canopy will result in a cost both to the vineyard and the environment.

To maximise droplet capture, the GoldAcres Director Sprayer has been designed to:

- Direct air straight into the canopy from the top, underneath and alongside the crop by positioning the spray nozzles close to the target.
- Produce a high volume of low velocity air to maximise spray retention within the canopy. If high velocity air is employed, thatching of the leaves can occur, forming an impenetrable barrier to the spray material.
- Operate at pressures which will produce a consistent optimal droplet size.
- Provides excellent canopy penetration without the requirement of high tractor horsepower.

• Greater contact area due to spray angle being diagonal to rear. Air stream directed to rear covers both sides of leaves.

• Standard electronic remote sprayer control and fan speed monitor.

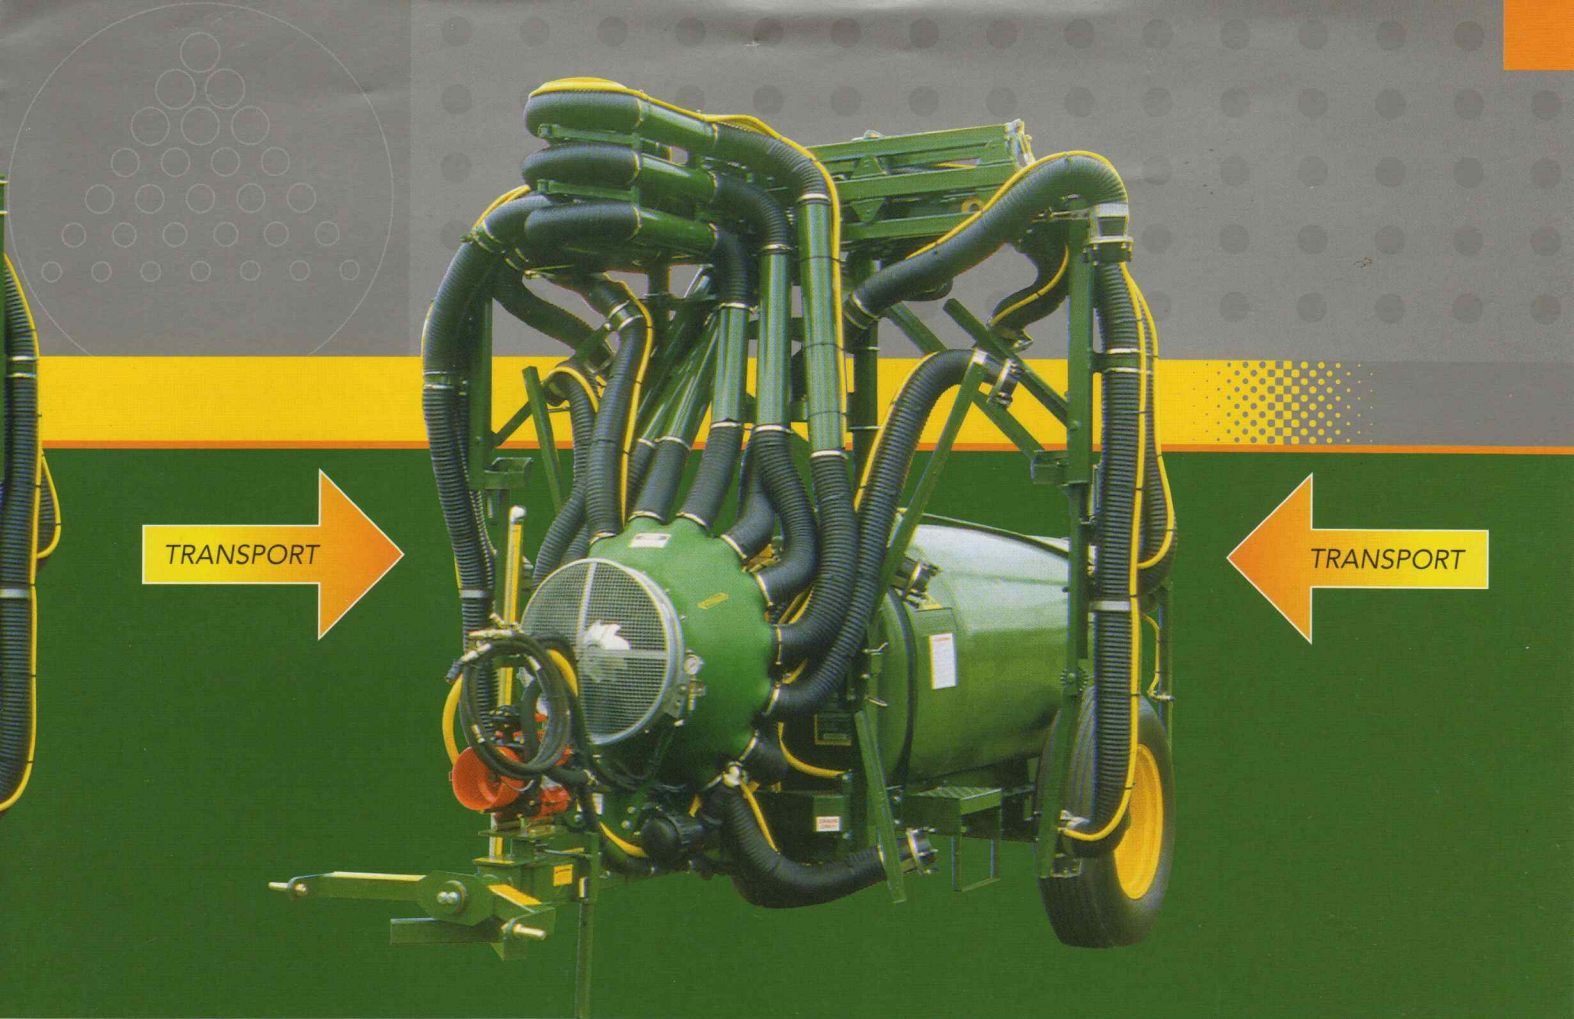

• Optional Raven automatic sprayer controller maintains constant application rate.

• Optional Raven automatic sprayer controller with DataBoy attachment.

• Unique mounting and turning pivot allows tighter turning while maintaining direct PTO alignment.

TRANSPORT

TRANSPORT

PORA Jet System.

Five nozzle stainless steel encircling manifold.
Rate changes made easy by simply adding or removing nozzles from the manifold.

Operator Safety:
Flush tank for component and nozzle rinsing.

Operator Safety:
Draw chemicals into sprayer with venturi chemical probe.

Hydraulic drive
to the fan allows great variation of air speed independent to the spray pump.

Efficient low maintenance hydraulically driven fan:
Gives excellent canopy penetration without requiring high tractor horse power. Eliminates drive-through shaft, gearbox and V-belts.

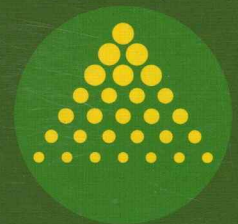

Quality Components:
Udor diaphragm pumps. Highly efficient filtration system mounted conveniently for cleaning.

DIRECTOR VINE AND TRELLIS SPRAYER

- 3PL Sprayers available in 400 and 600 litre.
