MAGNATRAC II

New Breed of Power....

MAGNATRAC II New Breed of Power....

The Magnatrac II features a completely redesigned track system which gives it the ultimate in track stability and no nonsense traction.

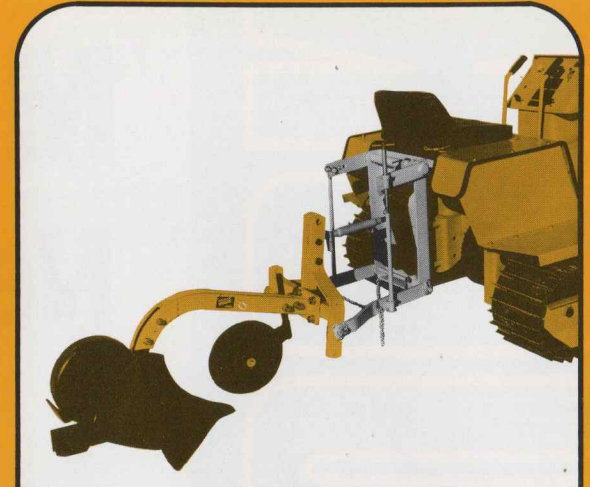

Magnatrac II uses dual track chains in each track compared to the single chain in our standard Magnatrac. In addition the track shoes are a full 9½" wide and made of heavy 7 ga. steel plate with an increased gripping edge.

This new, wider, heavier track system gives the Magnatrac II additional side hill stability along with its more than 50% larger "track footprint" which gets you through the softest going — all this performance and the Magnatrac II is only 48" wide.

Other features of the Magnatrac II are:

- New Track Sprocket design to give additional mud and snow relief to track chain when the going gets extremely soft.
- Track Sprockets are heat treated to give added resistance to wear.
- Hardened axles throughout the track system along with "outboard" mounted zerk fittings on ends of all lower track idlers.
- Additional Track Idlers front and rear for a total of four Track Idlers which keep each Track in constant contact with the ground.
- All standard Magnatrac attachments; Loader, Backhoe, garden implements, etc. fit the new Magnatrac II.
- New "Dyna-Static" balanced 16 HP Engine greatly reduces tractor vibration.

Also New...

The all new RH50 Three Point Hitch (shown mounted on Magnatrac II above) is now available along with a complete line of heavier and more versatile gardening and landscaping attachments. This heavy duty Hitch fits all our Magnatrac and Turf-Rider series tractors.
