

5545

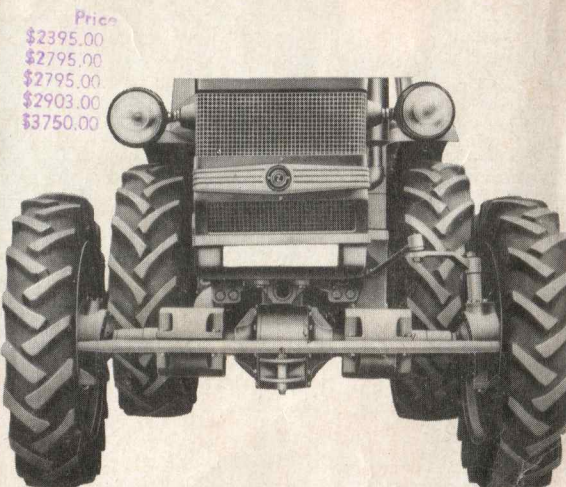

Instead of the standard front axle with extensions, the Zetor 5545 tractors have a driven front axle (front wheel drive). The front wheels are steered and have a shorter diameter than the rear wheels.

The Zetor 5545 tractors are designed mainly for heavier soils with a lower negotiability and lower adhesion coefficient, the maximum gradient being 16°. This model is particularly suitable for operation in hilly, moist, swampy, or sandy areas. Besides, the Z 5545 model can be employed for the same jobs as the 5511 tractor.

Accordingly, it can be used:

- a) for forest jobs with a power winch, for hauling timber and its transport to timber yards
- b) for farm jobs – for pulling or driving farm machines in highlands. The 1425 mm or 4'8" rear wheel track is adjustable.

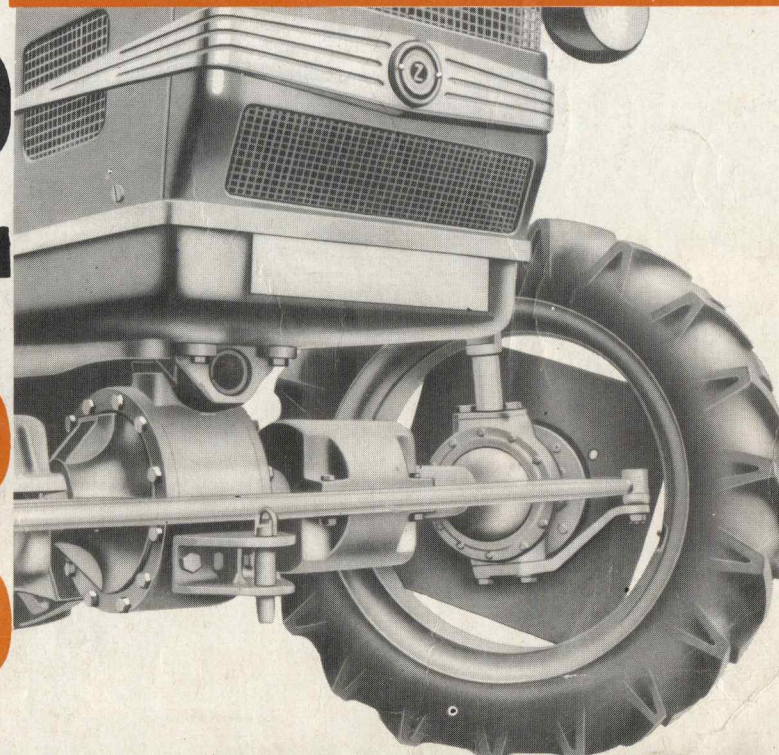

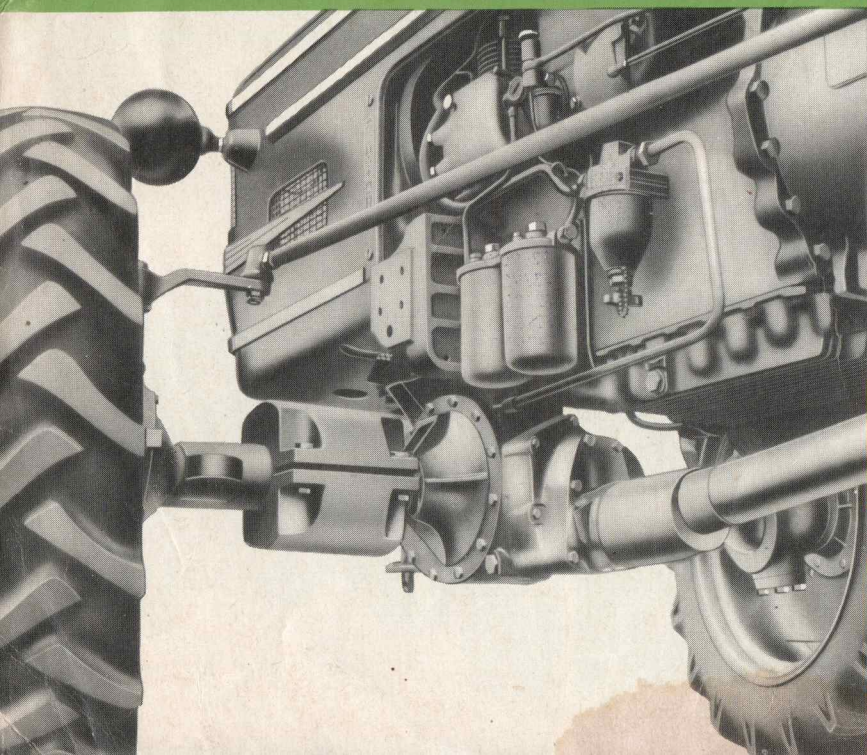

The driven front axle is unsprung – rocking. The front wheel drive can be engaged from the driver's seat. Both the engagement and disengagement of the front wheel drive can be effected with the tractor in motion. The drive is protected against overloading by means of an overload release coupling. The front wheel drive can be employed in conjunction with either road and reduction gears; both front wheels are driven via a differential.

ZETOR 5545 TRACTOR – TECHNICAL DATA:

Engine model	Zetor 5501
Bore	95 mm or 3.74"
Stroke	110 mm or 4.33"
Power class	55 BHP
Wheelbase	2220 mm or 7' 3.4"
Minimum ground clearance	325 mm or 1' 0.8"
Front wheel track	1450 mm or 3' 5"
Rear wheel track	1425 to 1800 mm or 4' 8" to 5'10.9"
Front wheel tyres	8 – 24"
Rear wheel tyres	13 – 28"
Weight of „Agro“ tractor version with water-filled tyres	3460 kg or 7628 lb
Tractive effort on dry concrete roadway, front wheel drive engaged	2600 kg or 5732 lb
Tractive effort on dry concrete roadway, front wheel drive not engaged	2400 kg or 5291 lb
