STIHL FS 08

Now the care and maintenance of young growth has become even easier.

Up to now using a STIHL-Brushcutter to cut grass, weeds and matted shrubbery was the latest and most practical method. But now it is also a real pleasure to work with a STIHL-Brushcutter.

Because our new STIHL-Brushcutter FS-08 is equipped with a STIHL-AV handle, which through three strategically located vibration eliminating shock absorbers almost completely absorbs the fatiguing engine vibrations. This anti-vibration feature permits you to use the Brushcutter for hours without physical discomfort to your arms and back.

A Brushcutter with STIHL-AV (anti-vibration) comfort.

The STIHL FS-08 is available with three inter-changeable cutting tools: the two rotary knives – either with three or with six blades – for mowing grass and weeds. The word mowing can nearly be taken literally. You guide the STIHL FS-08 like a scythe, but without the wearing swinging cut. The work is done by the rotary knives. The rotating knives are efficiently powered by a strong engine, and a ball-shaped protective guard prevents the grass weeds from jamming the blade. The circular plate of the STIHL FS-08, with a diameter of 30 cm (12 in.) is perfect for clearing and thinning. It also allows you to cut young trees of up to 4 inches in diameter in seconds.

STIHL FS 08

SPECIFICATIONS:

STIHL - single cylinder, two cycle gasoline engine with hard chromium impregnated cylinder.

Piston displacement: 55 cu. cm (3.42 cu. inches)

Tank capacity: 0.76 litre (1.61 pints)

Fuel consumption: about 1.0 litre (2.13 pints) of gasoline oil mixture (25:1) per working hour

All-position Tillotson diaphragm carburetor with built-in fuel pump

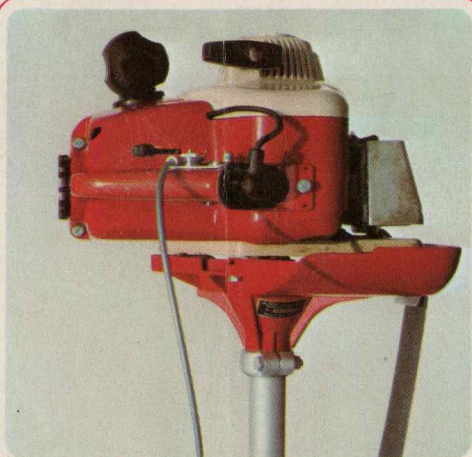

Easy starting by throttle lock and choke shutter

Fully enclosed water and dirt proof Bosch ignition system

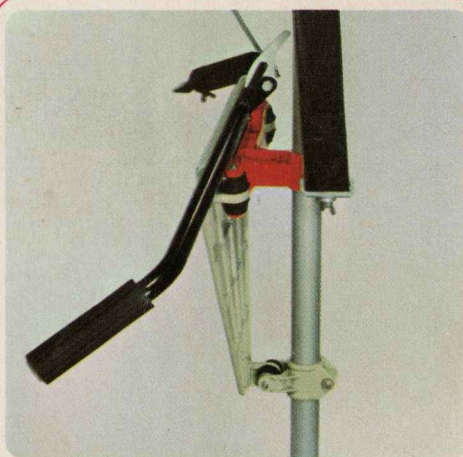

Centrifugal clutch with bonded liners

Precision cut helical gear - 2:1 Ratio

Weight of complete power tool: ca. 13 kgs. (29.7 lbs.)

If you already have a STIHL-08 S power saw you can get the STIHL FS-08 Brushcutter as an attachment to your power saw, and will not need to buy a separate power head.

This is the anti-vibration feature on the STIHL FS-08: three strategically located rubber shock absorbers. Seemingly very simple - but the result of many years of research and development.

The new harness is as comfortable as a modern knapsack. Neither your shoulders or your back are unnecessarily strained, and you hardly feel the weight of the well balanced light engine.
